SECOND SEMESTER M.Sc. DEGREE EXAMINATION, AUGUST 2013 (CUCSS)

Mathematics

MT 2C 09—P.D.E. AND INTEGRAL EQUATIONS

Time: Three Hours Maximum: 36 Weightage

Part A

Answer all questions.

Each question has maighteen 1.

- 1. Obtain the partial differential equation satisfied by all surfaces of revolution with z-axis as the axis of revolution.
- 2. Show that (x 2 + (y + z 2 =1 is a complete integral of z^2 (1 p^2 q^2
- 3. Determine the domain in which the two equations $f = \mathbf{x}\mathbf{p} \mathbf{y}\mathbf{q} x = \mathbf{0}$ and $g = \mathbf{x}^2 p + q$ are compatible.
- 4. Write the following equation in the Clairant form and solve it:

$$\mathbf{p}_{\mathbf{q}} = \mathbf{p}^{2} \left(\mathbf{p}^{2} \quad \mathbf{x} \mathbf{q} \right) \quad \mathbf{q}^{2} \left(\mathbf{q}^{2} \quad \mathbf{y} \mathbf{p} \right).$$

- 5. What is an initial strip ?
- 6. Write the classification of the equation:

$$(n-1)^2 u_{xx} - 2n u_{yy} = ny^{2n-1} u$$

- 7. State the Dirichlet problem and show that the solution of the Dirichlet problem, if it exists, is unique.
- 8. State the Cauchy problem for the equation $AU_{aa} + BU_{ab} + CU_{yy} = F(x, y, u, u_a, u_b)$ where A, B and C are functions of x and y and give an example.
- 9. State Harnack's theorem.
- 10. Differentiate between Fredholm and Voltera integral equations.
- 11. If y'' = F(x), and y statisfies the initial conditions $y(0) = y_0$ and y'(0) = A, show that

$$y(x) = |(x -)F| + |(x + y_0)|$$

Turn over

- 12. Determine p(x) and q(x) in such a way that the equation $\int_{-\infty}^{2} \frac{dx}{dx^2} \frac{dx}{dx} + 2y = 0$ is equivalent to the equation $\int_{-\infty}^{\infty} \left(p(x) \frac{dx}{dx} \right) + q(x) y = 0$.
- 13. Show that the characteristic numbers of a **Fredholm** equation with a real symmetrical Kernel are all real.
- 14. Define separable Kernel and give an example of it.

 $(14 \times 1 = 14 \text{ weightage})$

Part B

Answer **any seven** questions. Each question has weightage 2.

- 15. Find the general integral of y = p + x = q = x + y.
- 16. Show that the **Pfaffian** differential equation $(\mathbf{y^2} + \mathbf{y^2}) d\mathbf{x} + (\mathbf{zy} + z^2) d\mathbf{y} + (y^2 \mathbf{zy}) d\mathbf{z} = 0$ is integrable and **find** the corresponding integral.
- 17. Find the complete integral of $xpq + yq^2 1 = 0$.
- 18. Solve the following equation by Jacobi's method:

$$u_{x} x^{n} - u_{y} - au_{z} = 0.$$

- 19. Reduce the equation $u_{\perp +} 4x^2 u_{yy} = \frac{1}{x} u_{\perp +}$ into its canonical form.
- 20. Obtain the D'Alembert's solution which describes the vibrations of an infinite string.
- 21. Solve the Neumann problem for the upper half plane.
- 22. Transform the problem $\frac{d^n y}{dx^2} + y = x$, y (0) =1, y' (1) = 0 to a Fredholm integral equation.
- 23. Write a note on Neumann series.
- 24. Consider the integral equation $\mathbf{y}^{\prime}(\mathbf{x}) = \int_{0}^{\mathbf{x}} \mathbf{y}^{\prime} d^{-\frac{1}{2}} d^{-\frac{1}{2}} \mathbf{y}^{\prime} d^{-\frac{1}{2}}$ Show that the iterative procedure leads

to the expression y (x)=1+x
$$\frac{1}{2} = \frac{2}{6} = \frac{3}{18} + ...$$

 $(7 \times 2 = 14 \text{ weightage})$

Part C

Answer any **two** questions. Each question has weightage 4.

25. Using the method of characteristics, find the solution of the equation

 $z = \frac{1}{2}(p^2 + q^2) + (p - x) (q y)$ which passes through the x-axis.

- 26. Show that the solution for the Dirichlet problem for a circle of radius a is given by the Poisson integral formula.
- 27. (a) Solve $u_1 = \frac{0 < x < l, t > 0}{}$

$$u(0, t) = u(1, t) = 0$$

$$u(x, 0) = x(l - x), O < -x51.$$

- (b) Show that the solution of the problem in part (a) is unique.
- 28. (a) Show that the characteristic values of X for the equation $y(x) = \sin(x + y)$ d are

= $\frac{1}{n}$ and ?2 = $-\frac{1}{n}$ with corresponding characteristic functions of the form $y_1(x) = \sin x + \cos x$ and $y_2(x) = \sin x - \cos x$.

(b) Obtain the most general solution of the equation $y(x) = \int_{0}^{2n} \sin(x + y) d + x$ under the

assumption that λ

 $(2 \times 4 = 8 \text{ weightage})$
